WORLD COFFEE PRODUCTION

ESTIMATE DOWN

Summary

The Foreign Agricultural Service's fourth estimate (March) of the 1968-69 world coffee crop shows a slight decrease from the last estimate (December). The total world crop is now estimated at 61.7 million bags, 1/ with exportable production 2/ of about 44.7 million bags.

The 1968-69 crop year is the third consecutive one in which estimated exportable production is less than anticipated world import demand. Thus, there should be a further drawdown of the surplus stocks held in some producing countries.

Individual country production estimates have been adjusted as follows: decreases of 150,000 bags for Guatemala and 100,000 bags for Kenya; increases of 100,000 bags each for Colombia and Uganda.

There have also been some minor changes in the figures for 1967-68, resulting in a total production estimate of 68.6 million bags for that year, with exportable production now put at about 52.3 million bags.

Green coffee prices (all four major types) rose slightly in February, but most prices declined again in March to about the January level. Only Brazil's ran counter to this trend by continuing firm and even rising slightly in March.

1/ All bags in text and tables are of 60 kg. (132.276 lb.)

2/ Exportable production: total production less estimated domestic consumption.

GREEN COFFEE: World total harvested production for the marketing year 1968-69, with comparisons 1/

1/ Coffee marketing year begins about July in some countries and in others about October. Exportable production represents total harvested production minus estimated domestic consumption. 2/ Of 60 kilograms each. 3/ Includes Guadeloupe, Hawaii (USA), Jamaica, Martinique, Panama, Puerto Rico, and Trinidad and Tobago. 4/ As indicated in footnote 1, the coffee marketing year begins in some countries as early as July. Ecuador is one of these countries. Hence, the crop harvested principally during June-October 1967 in that country is shown as production for the 1967-68 marketing year. In Ecuador, however, this is referred to as the 1966-67 crop. 5/ Includes Bolivia, Guyana, Paraguay, and Surinam. 6/ Includes Cape Verde, Comoro Islands, Congo (Brazzaville), Dahomey, Gabon, Ghana, Liberia, Nigeria, Sao Tome and Principe, and Spanish Guinea. 7/ Includes Malaysia, New Caledonia, New Hebrides, Papua and New Guinea, Portuguese Timor, South Vietnam, and Yemen.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of Agricultural Attaches and Foreign Service Officers, results of office research and related information.

1/ Coffee marketing year begins about July in some countries and in others about October. Exportable production represents total harvested production minus estimated domestic consumption. 2/ Of 60 kilograms each. 3/ Includes Guadeloupe, Hawaii (USA), Jamaica, Martinique, Panama, Puerto Rico and Trinidad and Tobago. 4/ As indicated in footnote 1, the coffee marketing year begins in some countries as early as July. Ecuador is one of these countries. Hence, the crop harvested principally during June-October 1967 in that country is shown as production for the 1967-68 marketing year. In Ecuador, however, this is referred to as the 1966-67 crop. 5/ Includes Bolivia, Guyana, Paraguay, and Surinam. 6/ Includes Cape Verde, Comoro Islands, Congo (Brazzaville), Dahomey, Gabon, Ghana, Liberia, Nigeria, Sao Tome and Principe, and Spanish Guinea. 7/ Includes Malaysia, New Caledonia, New Hebrides, Papua and New Guinea, Portuguese Timor, South Vietnam, and Yemen.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of Agricultural Attaches and Foreign Service Officers, results of office research and related information.

Lack of interest in the market was attributable to the large inventories built up in earlier months in anticipation of the dock strike. If present reports of another small Brazilian crop in 1969-70 are confirmed, the market may be expected to show more strength once inventories are back to more normal levels.

Production

Latin America: The 1968-69 production estimate for Brazil is not yet final, but no major revision is expected. Some trade sources believe the figure should be somewhat lower, but the USDA estimate remains unchanged for the present. On the basis of recent information, the production estimate for Colombia has been raised by 100,000 bags for both 1967-68 and 1968-69. Other changes in the Western Hemisphere include reductions in the estimates for Guatemala, Costa Rica, Dominican Republic, and Haiti. In the first two countries this appears to reflect the "off year" in the production cycle in Central America, while production in the two Caribbean countries reflects drought damage and what appears to be a declining trend in coffee output.

Africa: Losses from coffee berry disease have been greater than anticipated in Kenya, and the estimate for 1968-69 has been lowered to 850,000 bags. Recent information points to a larger crop in Uganda, where production is now expected to reach 3.1 million bags or possibly even more. The estimate for Burundi has been raised slightly, and the outlook remains good for the Ivory Coast, Angola, and Tanzania.

Asia and Oceania: The estimate for India has been reduced slightly based on estimates from the Indian coffee Board.

Smaller Producing Countries: Exportable production in the smaller producing countries is estimated as follows (with comparable 1967-68 figures in parentheses), in bags of 60 kilograms each: Jamaica, 8,000 (9,000); Panama, 26,000 (24,000); Trinidad and Tobago, 62,000 (59,000); Bolivia, 35,000 (35,000); Paraguay, 64,000 (29,000); Congo (Brazzaville), 12,000 (9,000); Dahomey, 16,000 (13,000); Gabon, 13,000 (13,000); Ghana, 83,000 (92,000); Liberia, 63,000 (56,000); Nigeria, 48,000 (49,000); Spanish Guinea, 110,000 (110,000); New Caledonia, 30,000 (30,000); Papua and New Guinea, 275,000 (275,000); Portuguese Timor, 40,000 (43,000); Yemen, 40,000 (45,000).

Other Developments

Prices: Price levels for all four major types of coffee were fairly stable during the first quarter of 1969. All showed a tendency to rise in early

February, but most declined again in March to about the January level. Only Brazil's ran counter to this trend by remaining firm and even rising slightly in early March.

The market was extremely quiet during the quarter, not only in the United States but in Europe as well. In the case of the United States, at least, this lack of buyer interest is probably attributable to the very high level of inventories held by roasters and others. Bureau of the Census data indicate that green coffee inventories on December 31, 1968, amounted to slightly over 5 million bags (60 kg. each), down only 2 percent as compared with the record September 30, 1968, figure but up 120 percent as compared with the level at the end of December 1967. With the settlement of the dock strike, it may be anticipated that market demand will become more active. However, given the prevailing stock level, the slow market may extend over a much longer period than had been anticipated.

Trade: U. S. green coffee imports in 1968 amounted to 25.4 million bags, up 19 percent over those in 1967. Imports of soluble coffee declined, however, from 620,823 bags (green-bean equivalent) to 511,423 bags. Brazil continued as the number-one source of soluble coffee, with shipments of 427,801 bags (green-bean equivalent) to the U. S. market in 1968.

The United States purchased coffee from nearly all producing countries in 1968. Notable were substantially increased imports from Brazil and the Ivory Coast. On an overall basis, imports from Africa and Asia (largely Robustas) increased their share of the U. S. market from 34.4 percent in 1967 to 35.3 percent in 1968. Brazil's share of the market also increased from 28.5 percent to 32.8 percent in 1968, while Colombia lost ground, furnishing only 12 percent of U. S. imports in 1968 against 14.4 percent the previous year.

The International Coffee Agreement

The Thirteenth Session of the International Coffee Council was held at the seat of the Council in London from December 9-19, 1968.

One of the more important resolutions approved by the Council was that of adopting the statutes of the Diversification Fund. It is believed that the Fund will prove a useful tool in helping member countries meet their approved production goals and in assisting them to make better use of their potential economic resources. An organizational meeting of the Assembly of the Fund was held March 24-28.

Other resolutions approved by the ICC during its Thirteenth Session deleted certain countries from the Annex B list and provided for further strengthening of the export control provisions of the Organization.

The Executive Board of the ICO met in Abidjan, Ivory Coast, from February 27 to March 5, 1969. The most important item on the agenda was a review of the production goals submitted by each producing country in accordance with Article 48 of the Agreement. Although the subject was discussed at length, no final decisions were made, and it was decided to continue the meeting in London March 17-21, just prior to the Fourteenth Session of the Council. During the London meetings production goals were established for 1972-73. These amounted to 80.1 million bags, comprising exports of 59.1 million to both quota and nonquota markets and 21 million for domestic consumption in producing countries. It was also determined that the desired level of total stocks to be held in the territories of all exporting members is not to exceed 50 percent of the overall demand for 1972-73.
